

Fabric Care Tips

Simpson Performance Products recognizes that dry cleaning is not always an option. For those times, we suggest the Molecule line of products. Please note, certain, light to bright color combinations and intricate trim and embroidery applications increase the risk of dye bleed when washing. Wash and dry your suit at your own risk. Remove laundered suits from the washer immediately after washing and hang to dry.

Introducing the MoleculeT Technical Fabric Care System

MoleculeT is a fabric care system specifically formulated for NomexT material. The unique properties of the MoleculeT product line are designed to care for your racing suit when dry cleaning may not be an option. The Protector formula bonds to NomexT fabric to help repel potentially flammable stains from oil, grease, fuel, dirt, and other contaminants that may compromise the effectiveness of your racing suit. The Wash, refresher and spot cleaner can also help you stay race ready without affecting the performance of your suit.

The easy-to-use, four-step system includes:

- .16 oz. bottle of MOLECULE PROTECTOR
- .16 oz. bottle of MOLECULE WASH
- .16 oz. bottle of MOLECULE REFRESHER
- .4 oz. bottle of MOLECULE SPOT CLEANER

Molecule products have undergone extensive testing and analysis. Unlike ordinary detergents that contain additives that can attract moisture, oil, and flammable stains, MoleculeT has been specifically designed for the unique soils of the racing environment. The patent pending formula helps maintain the original look and feel of your racing suit allowing it to perform at its best, race after race.
